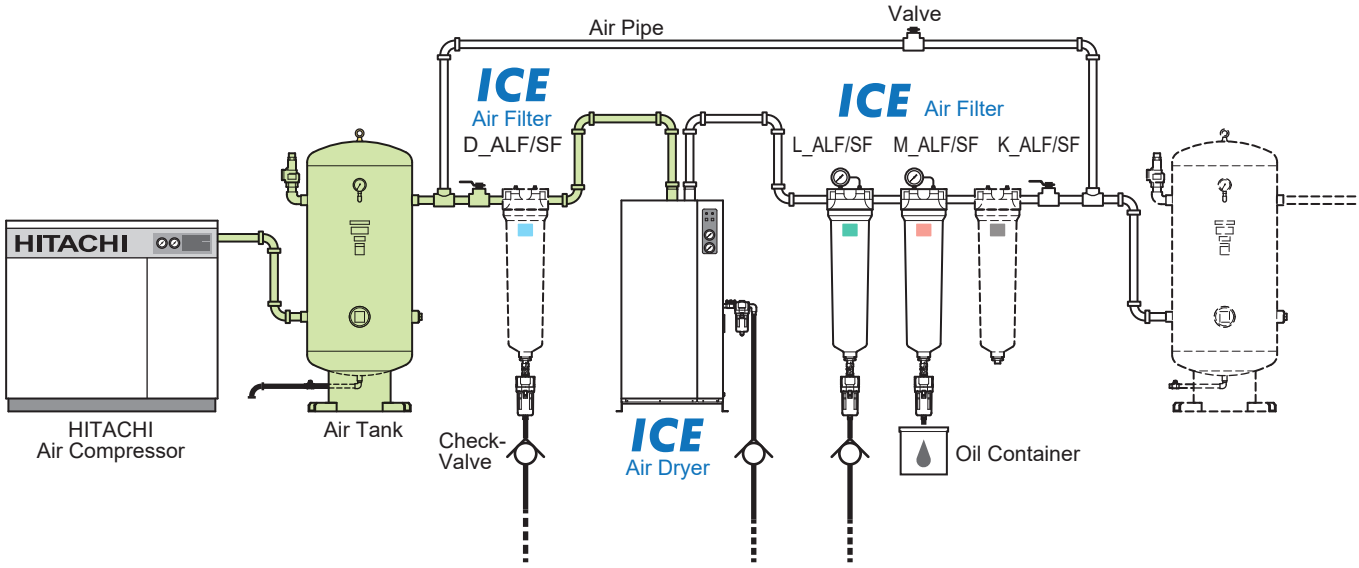
Basic System Examples

Air Quality Notes

Please install genuine Clean Air Filters 'before and after dryer' for the best performance.

Safety Notes

Before operating equipment, please read the operating manual carefully, and only use as indicated. For installation of equipment and required wiring, employ a qualified person or consult with your dealer. Be sure to select equipment which suits your needs. Do not use equipment for purposes other than intended. Doing so can lead to accidents or equipment breakdown.



System	Applications
★☆ Drain Filter + Air Dryer + Line Filter + Oil Mist Filter + Carbon Filter	General Painting, Precision Machinery Industry, etc
☆ Drain Filter + Air Dryer + Line Filter + Oil Mist Filter	Standard Pneumatic
Air Dryer + Line Filter + Oil Mist Filter	Standard Pneumatic
⚠ Line Filter + Air Dryer + Oil Mist Filter	⚠ Not recommended

1) Please consult with us for further information when compressed air is supplied for medical, food, or clean room use.
2) Please install a Super Drain Filter (D_ALF/SF) before air dryer to guarantee its performance.
3) Please set up above ☆system when Oil-Free compressor is installed.
4) Please set up above ★system when intake air of an air compressor includes large amount of oil droplets.
5) ⚠ L_ALF/SF is not recommended to be installed before dryers because it will increase differential pressure and drain water will be accumulated in the differential pressure gauge.
6) SUS pipe and SUS air tank are recommended when Oil-Free compressor is installed (as indicated in Green).
7) Please install a check valve on exhaust pipe of filter.
8) Please consult with us when you are not certain of air tank location (before or after air dryer).

Model Selection

1. For Air Dryer

1 **Temperature conditions**
Table A : High Inlet Air Temp. Models
Table B : Standard Air Temp. Models
Table C : Water Cooled Models
Table D : Air Cooled Models
Table E : Air Pressure Coefficient

2 Calculate the necessary air capacity for the model selection.
Air capacity required = Intake air volume / (A or B or C or D × E)

3 Please select the suitable model from the specification which has bigger Air Processing Capacity (P3) than the air capacity required.

Model selection Example

Inlet Air Temp.	60℃	Ambient Temp.	35℃	Air Flow	6m³/min
PDP	10℃	Air Pressure	0.59MPa	Frequency	50Hz

1 From charts, Inlet temp. coefficient → **0.70**
Air Pressure coefficient → **0.93**

2 Air capacity required for ICE Dryer,
6 / (0.70×0.93)=9.2m³/min

3 The suitable model to process 9.2m³/min is HAS-65AHL5, as its capacity exceeds the required value.
